

Ricorsa answers questions from the live web with numbered sources, and it remembers what each person asks about. That memory is an identity graph: the topics, entities, goals and expertise that surface in someone's questions, kept by them and readable by nothing but their own account. Every answer starts from that graph, so each question lands sharper than the last. From the same graph Ricorsa proposes things worth building, then builds them into working tools, apps, agents and decentralized apps.

EVERY QUESTION

1. Ask. Search for a fast answer, or Research for a report, with the model, focus and length you prefer.

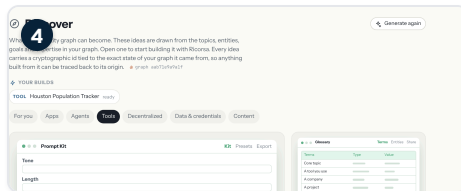

2. Answer. Ricorsa searches the web itself, reads the pages, and writes with citations that point at what it found.

3. Learn. What the question revealed is folded into the graph, which shapes the next suggestion and the next answer.

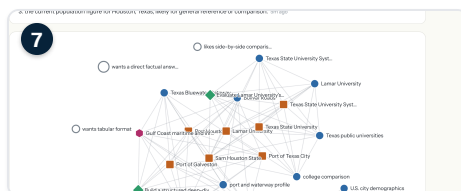

Home

One box for any question. Search gives a cited answer in seconds; Research plans several searches, reads the top pages and writes a report. The suggested questions come from your own graph.

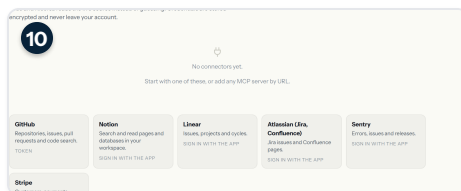

Discover

Ideas drawn from your graph, sorted into Apps, Agents, Tools, Decentralized, Data and credentials, and Content. Each card previews the screen it would become; one click builds it.

Your graph

What Ricorsa has learned, drawn as nodes and connections with the conversations that taught it. Pause learning, export everything, or reset it. The graph belongs to the person.

Connectors

Link GitHub, Notion, Linear, Atlassian, Sentry, Stripe or any MCP server with a token or a sign-in. When a connector is on, answers read live data from it instead of guessing.

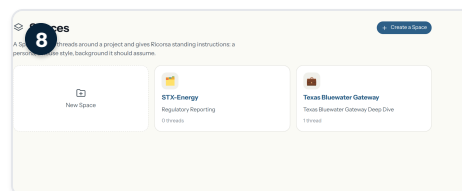

Sourced answers

Answers stream in with numbered citations tied to the pages Ricorsa retrieved moments ago. The strip at the top shows where each number leads; related questions keep the thread moving.

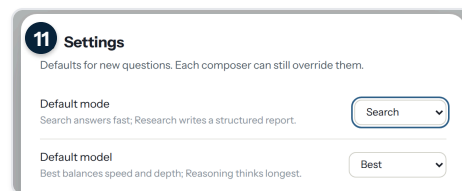

Build studio

Chat on the left, the working app on the right. The first version lands in about a minute. Each message becomes a new version, reviewed before it is called done, with next steps offered every time.

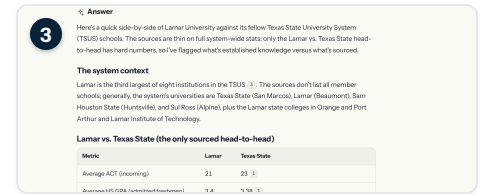

Spaces

A Space groups threads around a project and gives Ricorsa standing instructions: a persona, a house style, or background to assume for every question asked inside it.

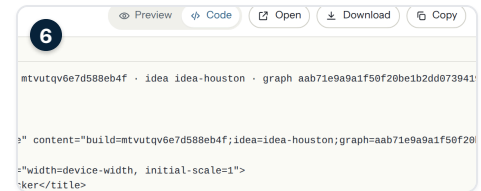

Settings and account

Defaults for every new question: mode, model, focus, answer length and whether learning is on. Export your data, manage the plan, or sign out from the same place.

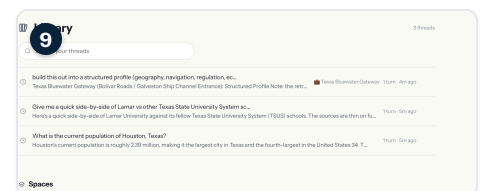

Research reports

Research mode runs four to six queries, reads the pages behind them and writes a longer report, with tables where they help and a citation on every claim that needs one.

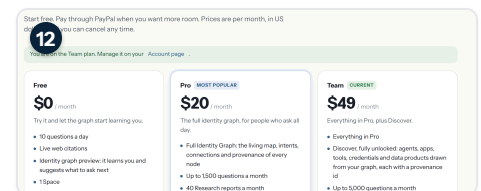

Preview and code

Flip from Preview to Code to watch the document being written line by line. Open the finished app in its own tab, download it as a single file, or copy the source.

Library

Every thread you have started, searchable, with the Space it belongs to and when it was last touched. Recent threads also sit in the sidebar, where any can be deleted.

Plans

Free to start, with 10 questions a day. Pro adds the full identity graph, Research and the Reasoning model. Team adds Discover, building and 25 connectors. Billing runs through PayPal.
